

# CR-580

## Cooling Water Treatment for Scale and Corrosion Control in Open Recirculating Systems

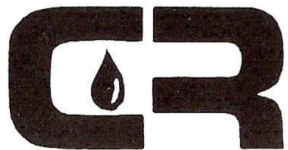

<b>APPLICATION</b>	CR-580 is a scientifically blended product designed to provide maximum protection against scale formation in heat exchangers. CR-580 is especially effective in high hardness and high alkalinity waters which are particularly scale forming. This product has special corrosion inhibiting ingredients coupled with dispersants to provide continuous cleaning action.
<b>ADVANTAGES</b>	CR-580 is non-chromate, non-phosphate and non-polluting in terms of water quality standards. CR-580 provides both crystallization inhibition and solids dispersion. This product provides excellent scale protection used alone thus eliminating the need for dangerous acid. A monomolecular layer is formed on all surfaces which reduces corrosion while keeping the system clean for maximum biocide effectiveness.
<b>DOSAGE RATES</b>	Severely fouled systems should first be cleaned.
<b>FEEDING</b>	CR-580 can easily be fed using a standard chemical feed pump. It can be added full strength or diluted.
<b>PRODUCT DATA</b>	PH: 6.5 TO 7.5 Color: Light Brown
<b>HANDLING</b>	Harmful if swallowed. Avoid contact with eyes, skin or clothing.

### CAUTION

Avoid contact with eyes and skin. May cause eye and skin irritation. Keep out of reach of children.

### FIRST AID

In case of contact with eyes or skin, flush with water. If irritation persists, call a physician.
